Art Unit: 2841

DETAILED ACTION

Election/Restrictions

- 1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - Claims 1-25, drawn to a method for forming a film on a substrate, classified in class 427, subclass 1+.
 - II. Claims 26-51, drawn to a method for forming an electronic device, classified in class 427, subclass 90+.
 - III. Claims 52-69, drawn to a deposition system, classified in class 118, subclass 1+.
 - IV. Claims 70-72, drawn to an integrated circuit, classified in class 361, subclass 760+.
 - V. Claims 73-75, drawn to a memory, classified in class 365, subclass 185.01+.
 - VI. Claims 76-78, drawn to a system, classified in class 361, subclass 775+.

 The inventions are distinct, each from the other because of the following reasons:

 Inventions (III-VI) and I-II are related as process of making and product made.

The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the method as claimed can be used to make

Art Unit: 2841

other and materially different product, for example, MCVD, or CVD instead of using gas precursor.

- 2. Inventions IV-VI and III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions of the Invention III can be used in different application such as, micronmachine or atomic applicable, and the Invention IV-VI is structure in a semiconductor.
- 3. Inventions VI and IV-V are related as combination and subcombination.

 Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the combination has utility such as a controller system or computer. The subcombination has separate utility such as an IC or a memory device, and both or they can be used in vary applications.
- 4. Inventions V and IV are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention V has separate utility such as a memory device or component having functions as access and retrieve data from an array cells of the memory device, and the Invention IV directly on an integrated

circuit, such as a die or capacitor die, and it could be as function as storage enrgy. See MPEP § 806.05(d).

- 5. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
- 6. Because these inventions are distinct for the reasons given above and the search required for Group I-II is not required for Group III-VI, restriction for examination purposes as indicated is proper.
- 7. Because these inventions are distinct for the reasons given above and the search required for Group III is not required for Group IV-VI, restriction for examination purposes as indicated is proper.
- 8. Because these inventions are distinct for the reasons given above and the search required for Group VI is not required for Group IV-V, restriction for examination purposes as indicated is proper.
- 9. Because these inventions are distinct for the reasons given above and the search required for Group IV is not required for Group V, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

10. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one

or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Tuan T. Dinh whose telephone number is 571-272-1929. The examiner can normally be reached on M-F.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Kammie Cuneo can be reached on 571-272-1957. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
